

Weeble File Manager Quick Install

Installation

This is the quick installation guide, for more detail please read the manual available in the same directory.

1. Unpack the files

```
cd /usr/local/www/data/  
tar -zxvf /path/to/weeblefm-1.1.tar.gz
```

2. Configuration

To configure the Weeble File Manager, open the settings.php file in your favorite editor.

The only settings that you must set before WeebleFM will work are \$server and \$port variables.

3. Use it.

Once settings.php has been edited to your liking, simply open your web browser and point it to where ever WeebleFM resides on your server. In the above example, we would direct our browser to `http://www.webserver.dom/weeblefm/`

See the manual (available in both txt and html formats) for more detailed information.
